

FLEXTRAC SERIES

ALPINE

PLASTIC CHAIN CONVEYOR SYSTEMS

Alpine conveyors allow accumulation while taking advantage of unused vertical real estate. Thanks to wheel bends, they're able to accommodate large amounts of product in a compact space.

FEATURES AND BENEFITS

MODULAR DESIGN

Flextrac Series conveyors feature a modular design that can change and adapt as you make changes to your plant and application. The design allows the addition and removal of components, or reconfiguration of the system.

SAVE FLOOR SPACE

Alpine conveyor systems use 180° curves to create vertical, space-saving areas that can be used for accumulation zones, cooling/drying during production, or as offline capacity to hold product during changeovers or machinery repairs.

T-SLOT DESIGN

The frame is built with a t-slot design that simplifies integration. It can be used to mount accessories, supports and guides.

PLASTIC CHAIN

Plastic chain has the ability to make turns and elevation changes within a single conveyor. These durable chains are also modular, with individual links that can be replaced to make chain repairs.

APPLICATIONS

Packaging

Automation & Assembly

Material Handling

Pharmacy
